SNAPTOGGLE® HEAVY-DUTY HOLLOW-WALL ANCHORS

Benefits compared to wing toggles:
• Holds up to 2x the load
• Solid metal channel resists vibration & shock
• Pre-assembled and ready for immediate use
• Pre-installs without fixture or bolt
• Installs in a significantly smaller hole
• Automatically adjusts to thickness of wall, ceiling, or floor
• Does NOT spin—bolt installs with a screw gun
• Uses a shorter bolt—no need to carry a wing
• New plating is 7 times more corrosion-resistant
• Does NOT fall behind wall when bolt is removed; fixture can be removed and reinstalled as often as desired

The latest generation of the ever-evolving TOGGLER hollow-wall anchor technology...

The SNAPTOGGLE anchor is a heavy-duty hollow-wall anchor for use in walls, ceilings, or floors of materials such as gypsum board, drywall, steel stud, concrete block, tile over drywall, etc. The anchor is pre-assembled and ready for immediate use. The ratcheting strap / locking cap assembly positions the one-piece zinc-plated (or stainless) steel anchoring channel flush against the rear of the wall. The cap slides down the straps to lock flush against the front of the wall. The straps on the outside of the wall are then easily and quickly snapped off by hand flush with the surface of the wall (no extra tools required). Holding is dependent only on a metal bolt to metal channel connection. The SNAPTOGGLE anchor complies with all existing fire codes for critical applications.

* Industry standards recommend 1/4 of ultimate test load.
* Holding strength for a SNAPTOGGLE heavy-duty hollow-wall anchor varies directly with the strength and condition of the substrate and the bolt size—and inversely with variations in hole diameter and the distance of the load from the wall.
* All figures in pounds. Pull-out values based on independent laboratory tests done according to U.S. Government standards. They should be used as guides only and cannot be guaranteed. The age, condition, and capacity of the substrate must be considered.

¹ Stainless steel bolts used
² Hardened bolts used
³ Stainless steel channel tested with stainless bolts in 1/2" steel plate
SNAPTOGGLE® HEAVY-DUTY HOLLOW-WALL ANCHORS

Specifications

Description — SNAPTOGGLE Heavy-Duty Hollow-Wall Anchors (Toggle Bolts)
Material — zinc-plated 1010 cold rolled steel (or 300 series stainless steel) metal channel, high-impact polystyrene straps and handle, translucent polypropylene copolymer cap
Screw specification — UNC-thread machine screw (bolt) to match thread in metal channel
Minimum screw length — thickness of wall or ceiling + thickness of item being fastened + 1/2"
Minimum clearance behind wall — 1¾"
Minimum drywall thickness — 3/8"
Maximum drywall thickness — 3¾" for BA & BB anchors
2½" for BC, BD & BE anchors
9½" for BAL & BBL anchors

The plastic straps and cap washer are positioning and retention elements only. They do not otherwise function as anchoring elements. Holding is dependent only on a metal bolt to metal channel connection. The SNAPTOGGLE anchor complies with all existing fire codes for critical applications.

a = anchoring channel / zinc-plated cold rolled steel or 300 series stainless steel
b = straps / high-impact polystyrene / locking ratchet
c = cap / translucent polypropylene copolymer
d = ergonomic handle / same as straps

The same product codes with an “S” at the end indicate stainless steel, e.g.,
BB = 1/4"-20 thread in the zinc-plated channel
BBS = 1/4"-20 thread in a stainless steel channel

* Long straps (L) for roofing and for very thick walls or ceilings

[For min. W & max. W., see “Grip Range” at left]

• Gently hand engage at least one thread of bolt with channel before using screw gun to avoid cross threading the bolt.
• For maximum shear holding, orient channels vertically to floor.
• Use hardened or stainless bolts for maximum weight load.
• Enlargement of specified insertion holes size will reduce anchor effectiveness.
• Remove anchor by removing bolt, inserting screwdriver and popping channel behind wall off plastic straps with a sharp blow.
• All SNAPTOGGLE anchors meet the requirements of Type V anchors in Federal Specification FF-B-588-D (superseded).
• All bolts and threaded rods used with SNAPTOGGLE anchors must meet ANSI or HR 3000 standards to ensure safety and effectiveness.

Installation Instructions

Drill appropriate size hole. Hold metal channel flat alongside plastic straps & slide channel through the hole. Minimum clearance behind wall: only 1¾".

Hold ends of straps together between thumb & forefinger and pull toward you until channel rests behind wall. Ratchet cap along straps with other hand until flange of cap is flush with wall.

Place thumb between straps at wall. Push thumb side to side, snapping off straps level with flange of cap.

Place item over flange. Insert bolt and tighten until snug against item, then stop. Use machine screw or bolt to match thread in metal channel.

T W

C = 1¾"
## Applications

- Flat panel TV’s
- TV mounts
- Lighting fixtures
- Window treatments
- Marine applications
- Hand rails
- Grab bars
- ADA hardware
- Office furniture
- Heavy machinery
- Partitions
- Cabinets
- Shelving
- Solar panels
- Garage doors
- Sinks
- Heavy fans
- DSS antennas
- Reinstallations
- Roofs & decking

## For maximum holding in

- Cinder block
- Concrete block
- Gypsum board
- Drywall
- Tile over drywall
- Plasterboard
- Composite panels
- Cement board
- Greenboard
- Plaster
- Stucco
- Fiberglass
- Plywood
- Steel plate
- Plastic
- Wood studs / beams

## Benefits

- **Strong**—up to 2x the load of an old-fashioned wing toggle
- Solid metal channel resists vibration and shock
  - bolt is centered in channel and positioned for precise installation
  - bolt threads never touch interior surface of hole and so can’t saw through substrate
- **Save time**—at least 6 minutes per anchor versus wing toggles
  - Can use a screw gun—anchor does not spin
- **Save money**—turn a 2-person job into a 1-person job
  - Use a shorter bolt—no need to carry a wing through the wall
  - New, patented strap design with sturdier straps and smaller ratchet interval:
    - adjusts more precisely and snaps off flush to wall, ceiling, or floor
    - does not break prematurely
    - pushes aside insulation
- **Smallest installation hole** for each bolt size—
  - maintains integrity of wall, ceiling, or floor, strengthening the anchoring
  - ends the need to patch an oversized hole
    - a 1/4” wing toggle requires a 3/4” diameter hole: 50% larger than the 1/2” diameter hole used by the 1/4” SNAPTOGGLE anchor
- New plating is 7x more corrosion-resistant than B633-85 Type III/SC 1 government spec high quality zinc plating  [350 hours to red rust in salt spray test versus only 48 hours for government spec]
- Pre-installs without the bolt to make handling of fixture easier
- **Reusable** in the same hole—remove the bolt without losing the anchor
- **New ergonomic design**—fingers grip straps more naturally and more easily with no slipping
